Packaging

**Your sewing machine is
only as good as the
needles you use!**

Needle anatomy

Front view

Side view

Needle size

NM 90

SIZE 14

Industry standard for use at home

The industrial blade design, which features rounded edges on the thread groove, minimizes thread breakage. Thanks to the optimized shape of the blade, the needle is more stable, which reduces needle breakage. The enhanced scarf allows for reliable loop formation and prevents skipped stitches.

Twist point LL	

Needle change

Replace your needle regularly!
This is the easiest way to improve seam quality.

Worn or damaged needles often lead to:

- Frayed threads or thread breakage
- Skipped stitches or uneven stitches
- Seam puckering
- Damaged textiles
- Popping sound during sewing

Rule of thumb

We recommend that you replace the needle after approx. 8 hours of sewing time. Or, as an easy-to-remember alternative: replace your needle at the start of each new project.

In addition, you can do a simple test to check whether your needle is still in perfect condition: Insert the needle into an old pair of sheer tights. If it gets stuck or pulls on threads when piercing or pulling out of the material, you should stop using it as its point is damaged.

Needle size

The NM needle size standard is based on the metric system. The NM specification corresponds to 100 times the needle blade diameter in millimeters (e.g. NM 90 = 0.9 mm blade diameter).

The SIZE standard is common in many English-speaking and Asian countries.

The following applies to both standards:
The higher the number, the thicker the needle.

Does the selected needle size match the thread?

The needle size not only needs to be suitable for the fabric, but also for the thread thickness. It must be able to run freely through the needle eye.

You can find this out with a simple test:

Hold the thread with the threaded needle at an angle of about 45°.

If the needle size and thread thickness are optimally matched, the needle will slowly slide down the thread under its own weight.

Coatings on SCHMETZ household sewing machine needles

The standard coating protects the needle from corrosion and wear when sewing everyday projects.

The GOLD Line offers extra needle durability: The gold-colored wear protection coating is particularly suitable for frequent sewing, sewing-intensive projects or work involving demanding, heavy fabrics. Minor user errors are compensated for by the extra hard coating, and, at the same time, the needle has to be replaced less often thanks to its longer service life.

The BLACK Line is used for delicate fabrics and adhesive elements. The black nonstick coating minimizes adhesion to the needle or eye, thus preventing skipped stitches and thread breakage. The needle's improved glideability also allows delicate materials to be handled gently.

UNIVERSAL

130/705 H

SCHMETZ

UNIVERSAL

scan me

System 130/705 H

with a slightly rounded point; for hassle-free sewing of a wide range of materials

Needle size

NM 60 to NM 130, also assorted

Alternative designation

HAx1, 15x1, 15x1 H, 705 H, 130 R, SY 2000, SY 2020, SY 2031

Also available as twin and triple needles

JERSEY

scan me

System 130/705 H SUK

with medium ball point; for knitwear

Needle size

NM 70 to NM 100, also assorted

Alternative designation

HAX1 SUK, 15x1 H SUK, 15x1 H M BALL, SY 2021, SY 2033

STRETCH

scan me

System 130/705 H-S

with medium ball point; for elastic materials and highly elastic knitted fabrics

The stronger shank flattening in combination with the special eye section and scarf shape prevents skipped stitches, especially in highly elastic fabrics.

Needle size

NM 65, NM 75, NM 90, also assorted

Alternative designation

705 HS, SY 2045

Also available as a twin needle

SUPER STRETCH

System HAx1 SP

Stretch Needle with wider eye, wider thread groove and special blade design; for sewing with thicker threads and to prevent needle breakage - as an alternative to Stretch Needles for elastic materials and highly elastic knitted fabrics

Needle size

NM 65, NM 75, NM 90, also assorted

Alternative designation

15x1 SP

Also for suitable sergers

BLACK SUPER STRETCH

System HAX1 SP SU

with medium ball point; widened eye and thread groove; the nonstick coating ensures improved glideability and the special blade design reduces needle breakage and skipped stitches; for delicate, highly elastic stretch fabrics such as lingerie fabrics

Needle size

NM 75 and NM 90

JEANS

System 130/705 H-J

with medium ball point that penetrates solid, thick fabrics more easily without damaging the material; the special blade design ensures less needle deflection and reduces the risk of needle breakage and skipped stitches; for denim (jeans) and similar, rigid woven fabrics

Needle size

NM 70 to NM 110, also assorted

Alternative designation

SY 2026

Also available as a twin needle

GOLD JEANS

System 130/705 H-JT

with medium ball point; longer needle life due to wear protection coating; the special blade design ensures less needle deflection and reduces the risk of needle breakage and skipped stitches; for demanding projects involving denim (jeans) and similar, rigid woven fabrics

Needle size

NM 90 and NM 100

MICROTEX

System 130/705 H-M

with particularly acute, slim point for easier penetration into very fine or densely woven materials; for particularly straight stitches when topstitching edges; also for silk, microfiber fabric, coated materials, foils and synthetic leather

Needle size

NM 60 to NM 110, also assorted

Alternative designation

SY 2023

BLACK SUPER FINE

System 130/705 H-SU XS

with slim, slightly rounded point; the very slim needle design and nonstick coating ensure particularly gentle handling of delicate materials and reduced adhesion to the needle; for very fine, delicate and light fabrics such as silk, organza, voile and viscose, also in combination with adhesive stabilizers

Needle size

NM 60 and NM 70

LEATHER DH

System 130/705 H DH

with cutting point DH (= half triangular point) for easier penetration; for straight stitches on leather, hard synthetic leather or similar materials

Needle size

NM 100

Not suitable for woven or knitted fabrics

LEATHER LL

System 130/705 H LL

with cutting point LL (= twist point) for easier penetration; for decorative seams with angled stitches on leather, hard synthetic leather or similar materials

Needle size

NM 70 to NM 120, also assorted

Alternative designation

H Ax1 LL, 15x2 N TW, 15x2 TW, 130 LL, SY 2032

Not suitable for woven or knitted fabrics

QUILTING

System 130/705 H-Q

with particularly slim, slightly rounded point that can easily penetrate thick layers without damaging the material; for quilting and patchwork projects

Needle size

NM 75 and NM 90, also assorted

Alternative designation

130/705 H-QU, SY 2019

TOPSTITCH

System 130/705 H-N

with particularly long needle eye (2 mm in all needle sizes) compared to the Universal or Embroidery Needle; for decorative and topstitching work involving several threads as well as for re-embroidery (repairing embroidery)

Needle size

NM 70 to NM 100, also assorted

Alternative designation

130 N, SY 2011

GOLD TOPSTITCH

System 130/705 H-NT

with particularly long needle eye (2 mm in all needle sizes) compared to the Universal and Embroidery Needle; longer needle life thanks to wear protection coating; for decorative and topstitching work involving metallic threads or several threads as well as for quilting

Needle size

NM 80 and NM 90

METALLIC

scan me

System 130/705 H-MET

with particularly long needle eye (2 mm in all needle sizes) compared to the Universal or Embroidery Needle; for working with special and effect threads, especially for metallic threads

Needle size

NM 80 and NM 90

Alternative designation

130 MET, 130/705 H-MF

Also available as a twin needle

EMBROIDERY

System 130/705 H-E

with medium ball point; particularly wide needle eye (compared to Universal Needle) and wide thread groove for thicker threads and woolen threads; for embroidery work

Needle size

NM 75 and NM 90, also assorted

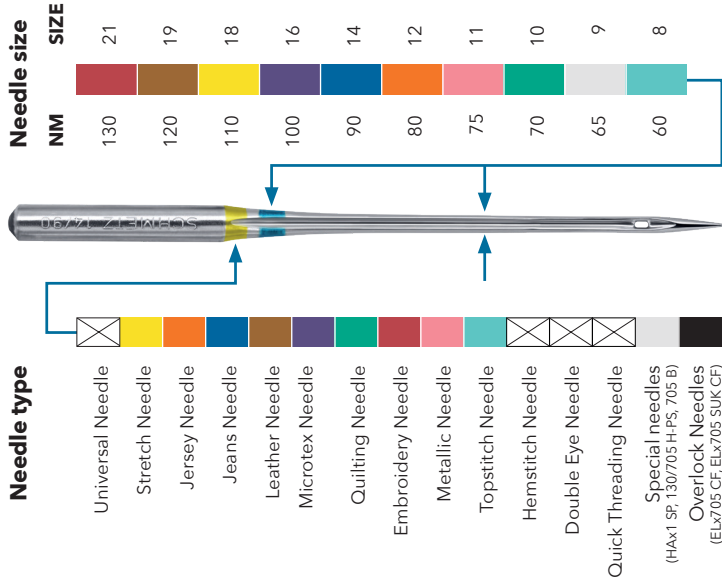

Alternative designation

130/705 H-EB, HAx130 EBBR, SY 2044

Also available as a twin needle

SCHMETZ Color marking

The color code on the shoulder of SCHMETZ household sewing machine needles allows you to quickly identify the needle type and size. The first color identifies the needle type and the second color identifies the needle size.

Note:  No color marking is used for this application.
The only color marking is for the size.

GOLD EMBROIDERY

System 130/705 H-ET

with medium ball point; enlarged eye; the wear protection coating ensures a longer needle service life in projects with higher stitch counts; for embroidery with embroidery machines, decorative stitches or free motion embroidery and solid materials

Needle size

NM 75 and NM 90

BLACK SUPER UNIVERSAL

System 130/705 H-SU

with slightly rounded point; special blade design; the nonstick coating ensures less adhesive residue on the needle and, together with the extra-large eye, prevents thread breakage; the special eye section, in combination with the scarf shape, prevents skipped stitches; for embroidery with self-adhesive non-woven backing and adhesive spray, hook-and-loop tape and for other demanding materials

Needle size

NM 70 to NM 100, also assorted

HEMSTITCH

System 130/705 H-WING

with wing-like widened needle blade that pushes the fabric to the side; for decorative seams and hemstitching in loosely woven fabrics

Needle size

NM 100 and NM 120

Alternative designation

SY 2040

Also available as a twin needle in combination with a Universal Needle

DOUBLE EYE

705 DE

SCHMETZ

DOPPELÖHR
DOUBLE EYE

scan me

System 705 DE

with two eyes; for decorative work with effect threads

Needle size

NM 80

QUICK THREADING

System 705 HDK

Universal Needle with a small slot on the side of the needle eye that allows the thread to glide into the eye; for quick and easy threading of the needle

Needle size

NM 80 and NM 90

Not suitable for fine, thin or delicate materials

Not suitable for machines with an oscillating hook

Twin and triple needles

Twin and triple needles are only suitable for zig-zag machines with a transverse hook. Twin needles with features that correspond to the relevant single needle are available for almost all sewing work.

Areas of application

Pintucks, single and multi-colored decorative seams, hems

Here you will find information on the most effective way to use twin and triple needles.

UNIVERSAL TWIN

System 130/705 H ZWI 1.6

Needle distance 1.6 mm

System 130/705 H DRI 3.0

Needle distance 3.0 mm

Needle size NM 80

Needles for special machines

For special machines such as overlock, longarm, high-speed machines, etc., other needle systems, such as ELx705 CF or 287 WH, whose dimensions and/or characteristics differ from standard household needles, may be needed. Please refer to your machine's instruction manual to select the appropriate needles and thereby ensure that the machine works properly.

Our product portfolio includes an extensive selection of needles for all sewing machine models. Simply scan the QR code to access our portfolio and explore our entire assortment.
